

BATCH RECORD		Lot Number:
Title: ARCT-2601 Drug Product, (mRNA-1801-2)		Version No: 0.1
		Page 13 of 72

9.2. RNA Calculations

Step	Instructions	Signature
9.2.1.	Record the batch size of RNA for formulation and calculate batch size with overage. $\underline{\hspace{2cm}} \text{ mg} + 6.5 \text{ mg} = \underline{\hspace{2cm}} \text{ mg}$ Target mass of RNA Overage of RNA for process Target mass of RNA with overage	
9.2.2.	Calculate the target volume of RNA required. $\underline{\hspace{2cm}} \text{ mg} / \underline{\hspace{2cm}} \text{ mg/mL} = \underline{\hspace{2cm}} \text{ mL}$ Target mass of RNA with overage from step 9.2.1 RNA concentration from step 9.1.2 Target volume of RNA with overage Calculate the target weight of RNA stock required. $\underline{\hspace{2cm}} \text{ mL} / 1.0 \text{ g/mL} = \underline{\hspace{2cm}} \text{ g}$ Target volume of RNA with overage from 9.2.2 RNA stock density Target weight of RNA with overage	Performed by/Date _____ Reviewed by/Date _____
9.2.3.	Calculate the target range for weight of RNA required. $0.99 \times \underline{\hspace{2cm}} \text{ g} = \underline{\hspace{2cm}} \text{ g}$ Target volume of RNA with overage from step 9.2.2 Lower limit $1.01 \times \underline{\hspace{2cm}} \text{ g} = \underline{\hspace{2cm}} \text{ g}$ Target volume of RNA with overage from step 9.2.2 Upper limit	
9.2.4.	Calculate the target volume of RNA after dilution. $\underline{\hspace{2cm}} \text{ mg} / 0.251 \text{ mg/mL} = \underline{\hspace{2cm}} \text{ mL}$ Target mass of RNA with overage from step 9.2.1 Diluted RNA concentration Target volume of Diluted RNA Intermediate (DRI) Calculate the target weight of RNA after dilution. $\underline{\hspace{2cm}} \text{ mL} / 1.0 \text{ g/mL} = \underline{\hspace{2cm}} \text{ g}$ Target volume of Diluted RNA Intermediate (DRI) from step 9.2.4 Density of Diluted RNA Intermediate (DRI) Target weight of Diluted RNA Intermediate (DRI)	Performed by/Date _____ Reviewed by/Date _____
